IZUO

BIO TECHNOLOGY

HEALTH AND MEDICINE STYLE DESIGN

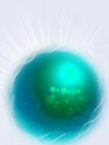

IZUO International Biotechnology Group (hereinafter referred to as "IZUO") is a full industry chain multinational group, with its brand headquarters located in Nevada, USA, its scientific and technological strength and research and development production coming from top biological laboratories in Germany and Japan, its raw materials selected from all over the world, its global trade center located in Hong Kong, and its Asia-Pacific regional operations center located in Xi'an, the ancient capital of a thousand years - Modengxian Company. IZUO focuses on the development of global biotechnology, devotes itself to the market-oriented operation of cutting-edge technology, strives to create a global biotechnology century-old enterprise, insists on leading health with science, and dedicates itself to the formation of a healthy ecological environment for all human beings.

SEE MORE →

Early Establishment

In 2007, the company was initially established and the founders of the group began to visit experts in biology, cytology and other related fields around the world for exchange and study, and hired a number of senior Internet technical talent to start building the team at the same time and officially started the path of entrepreneurship.

Pre-development

In 2012, through four years of technology paving and strength export, the company successfully established good cooperation with many overseas brands in Japan, Korea, Europe and America, and set up several biotechnology laboratories at home and abroad to enhance independent research and development capabilities. Since then, the company's global industrial chain has officially started.

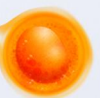

Brilliant Progress

In 2017, the company's resources were fully integrated, and the headquarters began to acquire international brands of health products and skin care products, and achieved full coverage of production and research in the field of efficacious biological health products. Through globalization acquisition, transnational technology cooperation and international patent support, the company continued to expand new channels and create new biotech beauty and care products in the "light era" based on high-quality supply chain and cutting-edge research and development power, and realize internationalized Internet sales.

Stable and Improved

From 2020 to 2022, IZUO International Biotechnology Group is committed to the concept of "Human Community with a Shared Future" and is actively fulfilling its social obligation to contribute to the COVID-19 while the COVID-19 is raging. With the synchronization of NCP and human life, the uncertain social environment has been wreaking havoc on people's physical and mental health, which makes IZUO more determined to create "beauty-care" products in the field of health with "pure health, top quality and affordable" as the guideline to promote the development of technology-based personal care experience and health industry.

The Future is Promising

The COVID-19 has had a great impact on the living environment of many industries, and has also aroused a high concern for human health. In the post-COVID-19 era, health product demand ushers in "huge amounts of the track". As a practitioner of the concept of "leading health with biotechnology", IZUO has responded to the demand of human health environment and insisted on improving the problem of human bodies and skin on "new normal" of the COVID-19 from the root. " IZUO continues to develop excellent "beauty-care" products to give value for human pursuit of "Frozen Age" and improve the well-being of people of all ages. IZUO is committed to becoming the "personal health manager of the light age" and dedicating a century to creating a future of sustainable health for all mankind.

HISTORY

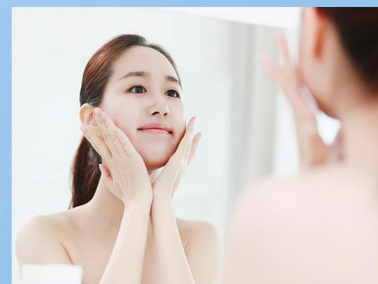

IZUO adheres to the goal of realizing "global human health strategy" and has long been based on the field of biological research and health products. Since its establishment, IZUO has been rapidly developing scientific research technology, accumulating core strengths, broadening the Internet IT e-commerce channel, opening up a full range of health consulting, and building a comprehensive technology care platform. With professional research and development technology, senior management strength and cutting-edge insight, IZUO are riding on the diversified development mode in the Internet era, riding on thousands of opportunities and striving for high growth.

Look to the future with down-to-earth, the health industry has a huge market. IZUO will continue to supply quality products with dedication and contribute to the development of the global human health ecosystem with the original intention of realizing a new vision of human health.

BIO-TECH

IZUO entrusts Japan Bio Science Laboratory Co., Ltd. for product R&D and production, and partners with many outstanding overseas plants. It also operates a number of local scientific research centers, including a sterile plant, a biological health research institute, and an organic plant R&D base, to support the domestic team as a main source of R&D and productive forces.

R&D AND PRODUCTION

The world's top biological laboratories, including Germany and Japan, have provided IZUO with technology research and development and mass production services, deepening IZUO's scientific research fields and promoting the flourishing of market subject, and IZUO's global economic volume has exceeded USD one billion.

With the growing influence of the brand, the sales channels continue to broaden, the demand for value products of enterprises is also increasing, and now IZUO is constructing the research and development and production and other industrial technology hardware by continuous cooperate in many countries.

R&D CONCEPT

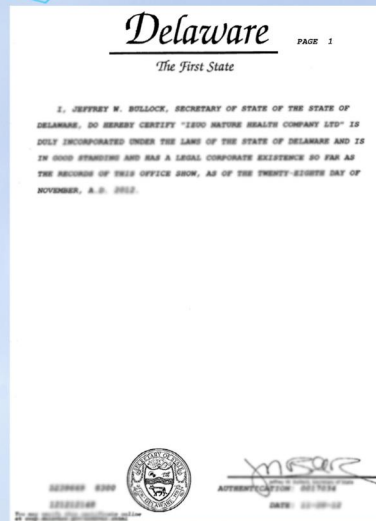

With the rapid changes of the times and the rapid development of technology, IZUO continues to promote the development of global human health by combining modern leading technology. With a solid academic foundation and research and development strength, IZUO International Biotechnology Group fully absorbs the active ingredients of global range and develops a series of patented scientific research projects and developed new generations efficient "beauty-care" products by integrating multidisciplinary theories and cutting-edge technologies methods with the spirit of innovation and the Industry-University-Research Collaboration, and the GMPC standard, which is higher than USA and EU product safety standards and skin care product requirements, is used for research and development and production. Our products have been recognized by the industry and consumers for their efficacy and safety, and we have made outstanding contributions in the fields of functional repair and beauty care over the past ten years.

IZUO will put its initial enthusiasm and deep sense of mission into the research and development of its entire product line, continuously improve its independent research and development capabilities, enrich the reserve of scientific and technological achievements, carry eternal human health with advanced technology, support individuals to fully realize their self-worth, and work together to build a grand blueprint for global human health life.
